

# ***Application Program Auto Load Guide***

---

***GstarCAD 2027***

## Table of Contents

1. Via LISP File .....	1
2. Via Registry .....	2
3. Copyright .....	3

## 1. Via LISP File

- Create 'gcaddoc.lsp' file under any user-defined program supported searchable path and add '(load "###.lsp")' to it.
- Create the '###.lsp' file under the same user-defined program supported searchable path and edit the file to add GRX or DLL files to be loaded, as shown below:

*(command "netload" "\*\*\*\*.dll")*

*(command "arx" "" "\*\*\*\*.grx")*

- The file path format shall be like: 'C:\folder\your.dll'

### NOTE:

1. This method is available for loading both GRX and .NET application program files.
2. GRX/DLL file needs to be placed under a program supported searchable path if only the file name (without full file path) is added to '###.lsp'.

## 2. Via Registry

- Create the following registry key with the following path manually or by programming:

'HKEY\_CURRENT\_USER\SOFTWARE\Gstarsoft\GstarCAD\R27\en-WW\Applications'

Another way to create the above registry key is: first get the following path by calling '*acrProductKey()*' and add '*Applications*' item to the end:

'HKEY\_CURRENT\_USER\SOFTWARE\Gstarsoft\GstarCAD\R27\en-WW'

**NOTE:** Must be '*Applications*', '*Application*' can't work here.

- Create a new item (e.g. '*MyProgram*') under '*Applications*' and add following keys to define the application program to be loaded:

### Managed

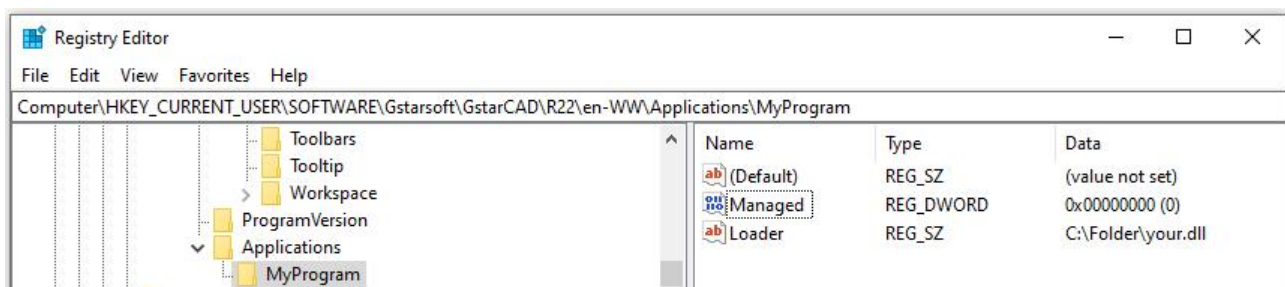

Type: DWORD

Data Value: 0 or 1 (0: GRX program, 1: .NET program)

### Loader

Type: String

Data Value: File path of application program to be loaded  
(e.g. 'C:\Folder\your.dll')

**NOTE:**

1. This method is available for loading both GRX and .NET application program files.
2. The file path of application program defined in **Loader** key must be searchable.
